The team and my role

- **Role:** Product Designer
- **Timeline:** July 2021 - March 2022
- **Team members:** AVP, 2 Product Manager, 1 Design Director, 1 Research Director, Product Designer, 2 Researchers, UX Ops, Developers
- **Constraints:** Human factors, this was COVID times and team members were falling sick.

How might we reduce user anxiety and rushed decisions during last-minute lineup changes?

Challenge – What?

Last-minute lineup change

- 30 mins before match → Official playing XI is announced

- Users suddenly discover:
  - Selected players not in lineup
  - Injuries / last-minute changes

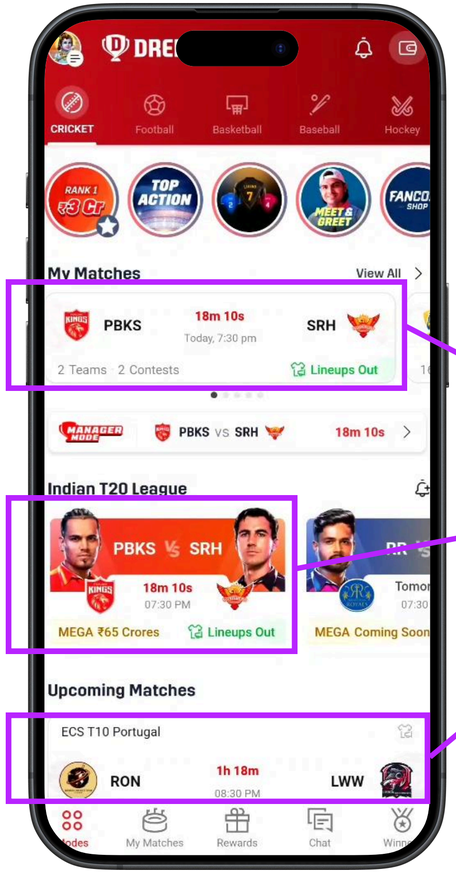

- User Struggle
  - Need to **re-edit teams quickly**
  - Often **miss deadline**
  - Experience **panic and uncertainty**

- Impact
  - Lost contests
  - Frustration
  - Reduced trust in platform

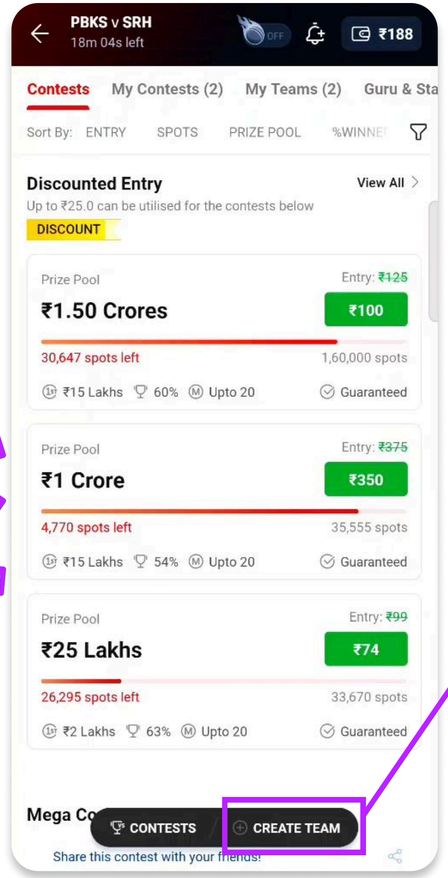

Challenge – Deep dive

Team creation

All teams built

When the match is live and teams are announced,

user has only 30 minutes to make edits...

How might we help users confidently update their teams within the last 30 minutes before match lock?

The Approach

Discovery

- User patterns on looker
- Market analysis
- Primary user interviews
- Thematic analysis → insights & requirement spec

Design

- Design workshops: prioritization, Information Architecture, rapid prototypes
- Hi-fidelity & coded prototypes; internal design reviews
- Design handover & dev support

Reviews

- Research reviews
- Design reviews

Deliverables

Research summary + prioritized requirements (RICE framework)

Deliverables

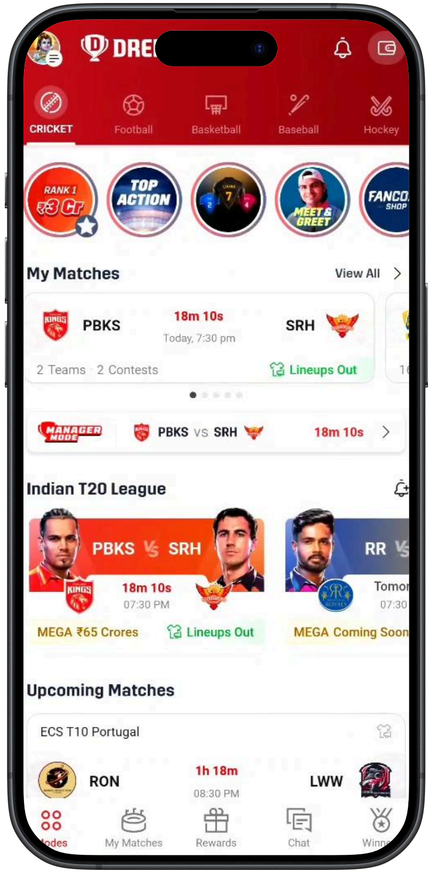

Solution concepts + information architecture + prototypes + process enhancements

Deliverables

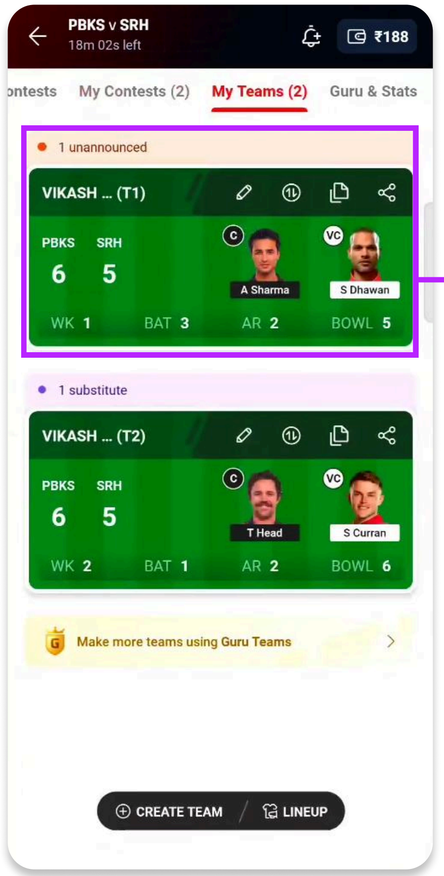

Feedback + enhancements + scope + alignment

Solution

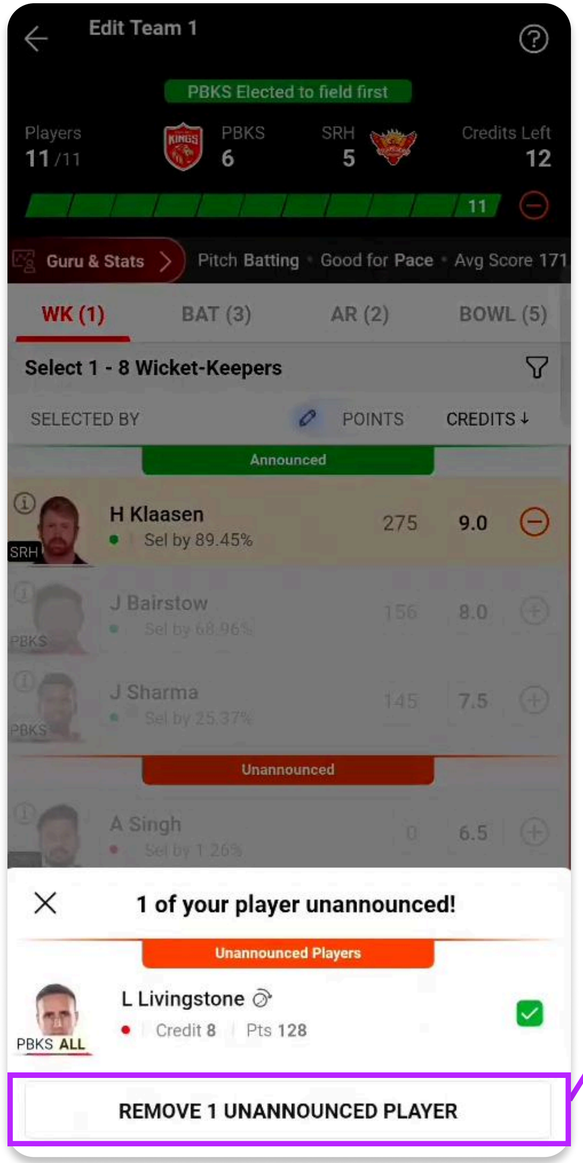

One click unannounced player removal
